SUMMARY

Full-stack engineer who **ships and deploys** — I build real products people actually use, not demos, and I own them end to end from spec to production. Strongest in **LLM-powered systems that go past the chat wrapper: agents, tool-calling, retrieval-augmented generation, and source-grounded pipelines**. I build with AI tools every day and move fast — I **designed, built, and deployed a live, publicly accessible AI product in 36 hours** at a hackathon. Completing an M.S. in Software Engineering at ASU (December 2026) on top of a CS & Engineering degree, with a stack that spans **TypeScript/Python, React/Next.js, Node and FastAPI backends, PostgreSQL, and AWS/Docker deployment**. I'd rather be an **early engineer on a small team** — own a real surface, sit near the founders, ship in week one, and find out quickly whether what I built worked — than the 300th hire in a rotation program.

TECHNICAL SKILLS

Languages: TypeScript, Python, JavaScript, SQL, Java, C++, HTML, CSS

LLM / Agents: LLM agents & tool-calling, RAG pipelines (retrieval + generation + citation grounding), LangChain, Anthropic Claude, Llama 3.3-70B, HuggingFace, embeddings, prompt engineering, VLM / multimodal APIs — *built past the chat wrapper*

Frontend: React, Next.js, TypeScript, Tailwind CSS, Framer Motion, responsive UI

Backend: Node.js, Express, FastAPI, REST API design, JWT / OAuth authentication, role-based access control, bcrypt, Prisma ORM

Databases: PostgreSQL, ChromaDB (vector), SQLite — schema design, query optimization, migrations

Cloud / DevOps: AWS (EC2, S3), Docker & Docker Compose, Vercel, CI/CD pipelines, Git / GitHub — *deployed and maintained in production*

Practices: end-to-end ownership, rapid prototyping, Agile/Scrum, AI-assisted development, technical documentation

PROJECTS & THINGS I'VE SHIPPED

Lofty Morning Handoff — Live AI Product, shipped in 36h (GlobeHack S1) 2026
Next.js, React, TypeScript, Python, LangChain, LLM

- **Built and deployed a working, publicly accessible AI product in 36 hours** at a hackathon — owned the whole surface: frontend, backend, LLM integration, deployment.
- Engineered an **agentic pipeline** with an **LLM assistant** that ingests inputs and produces a ranked, narrated, approval-ready queue — **tool-driven, not a chat wrapper**.
- Exactly the “ship fast, find out if it worked” loop: went from idea to deployed product overnight.

Course Copilot AI — Source-Grounded RAG Platform 2026
Next.js, FastAPI, Python, PostgreSQL, ChromaDB, LangChain, Anthropic Claude

- **An LLM project past the chat wrapper:** a **semantic RAG pipeline** over ChromaDB that returns **citation-backed, source-grounded** answers — retrieval, generation, and grounding, not a prompt box.
- Shipped the full stack: React/Next.js frontend, **FastAPI** backend, **PostgreSQL**, plus **JWT auth and role-based access control**.
- Owned it end to end — API contracts, schema, retrieval logic, and the UI.

Agile Alliance — Full-Stack App, deployed & maintained 2026
React, TypeScript, Node.js, Express, PostgreSQL, Prisma, Docker

- Built and maintained a full-stack app — auth, sprint boards, customizable workflows — on a **Node/Express + PostgreSQL** stack, **containerized with Docker**.

EDUCATION

M.S., Software Engineering — Arizona State University, Tempe, AZ Aug 2025 – Dec 2026
AI/ML integration, scalable systems, software architecture.

B.E., Computer Science & Engineering — Chitkara University, India 2021 – 2025

CERTIFICATIONS

- **Develop GenAI Apps with Gemini and Streamlit** — Google Cloud (Credly)
- **AWS Cloud Technical Essentials** — Amazon Web Services (Coursera)
- **Introduction to Cloud Computing** — IBM (Coursera)
- **Software Engineering Specialization** — University of Alberta (Coursera)
